This table shows the money you could get back over the next fifteen (15) years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the product. The figures shown include all the costs of the product itself but may not include all the costs that you pay to your advisor or distributor. This means it is difficult to estimate how much you would get back if you are willing to cash in before the recommended holding period (15 years). You will either be unable to cash in early due to the lock-up period in place or you will have to pay high costs in order to sell your product to another person or make a large loss if you do so. The figures shown include all the costs of the product itself but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.
